**DETAILED ACTION**

Claim 1-34 are pending.

***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, Claims 4–26, drawn to a method of treatment using a 20-HETE synthesizing enzyme inhibitor.

Group II, Claims 27-34, drawn to a method of treatment using an inhibitor of 20-HETE synthesizing enzyme expression.

For each of Inventions I and II above, restriction to one of the following is also required under 35 USC 121 and 327. Therefore, election is required of one of Inventions I and II and one of Inventions (A)-(K).

For Invention I, elect one of:

- (A) HET0016
- (B) 17-ODYA
- (C) dibromododecenyl methylsulfimide
- (D) 1-aminobenzotriazole
- (E) miconazole
- (F) an antibody to a 20-HETE synthesizing enzyme
- (G) a CYP4A inhibitor

Art Unit: 1652

For Invention II, elect one of:

(H) SEQ ID NO: 1

(I) SEQ ID NO: 3

(J) SEQ ID NO: 2

(K) SEQ ID NO: 4

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reasons: The technical feature linking Groups I and II appears to be that they all relate to HETE synthesizing enzymes. However, Alonso-Galicia et al, 1997 (IDS) teach treatment with dibromododecenyl methylsulfimide (Fig 1), which anticipates Claims 1, 5, and 25. Therefore Groups I and II share no special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art. Furthermore, the methods of Groups I and II do not use the same reagents or produce the same results. Accordingly, Groups I and II are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

Searching both of Groups I and II would represent a burden on the Office because the methods of Groups I and II do not recite the same steps and products used, and/or results produced.

These inventions lack Unity of Invention for the reasons given above. Furthermore, each invention has acquired a separate status in the art due to their recognized divergent subject matter and, thus, searching more than one invention would be a burden on the Office. Therefore, restriction for examination purposes, as indicated, is proper.

Claims 1-3 link Inventions I and II. The restriction requirement restricting the linked inventions is subject to the nonallowance of the linking claims, Claims 1-3. Upon the allowance of the linking claims, the restriction requirement as to the linked inventions shall be withdrawn and any claims depending from or otherwise including all the limitations of the allowable linking claims will be entitled to examination in the instant application. Applicants are advised that if any such claims depending from or including all the limitations of the allowable linking claims is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
